

AKUART GUIDE FOR ORDERING PHYSICAL PRINT SAMPLES

Please go through the guide for ordering physical AKUART print samples. This will optimize the ordering process and eliminate misunderstandings leading to wrongful prints. If you need something that is not specified in the guide do not hesitate to contact us for options.

Print file specifications

See our separate guide for handing over optimal print files.

Specify what aspects of the print you want to test

Briefly describe what aspects of the print you want to test in order for us to provide you with a sample that takes these aspects into consideration. This will increase the possibility for the final print to come out as accurate as possible.

Digital preview

In advance, we will always send a digital preview of the print file to eliminate as many potential misunderstandings as possible before we send out the physical sample.

Sample price

Price per physical print sample is 68 EUR / 80 USD. The price includes graphic handling and setting up the file for print. Shipping costs are not included in the price.

AKUART GUIDE FOR ORDERING PHYSICAL PRINT SAMPLES

Sample size

You will receive a physical print sample of 1m² / 10.8 sqft. The sample will consist of a printed textile (without rubber keders). The sample will be a section of the print, unless the print is smaller than 1m² /10.8 sqft, in order to preview an exact 1:1 version of the final print.

NCS, RAL
↓
PANTONE

Color matching

Color matching is based on the Pantone color range. Note that physical colors from other color charts e.g. Ral, NCS etc. are matched to the nearest color from the Pantone color range. If the nearest Pantone color varies too much from the desired outcome we suggest using a complimentary color instead.

A slight variation in color tone can also occur when we have to match a physical pantone color. This is due to variations in ink composition, printer settings etc.

Matching wall paint colors

Wall paint colors are matched to the nearest color from the Pantone color range. Be aware that a color printed on canvas fabric will always vary somewhat from an identical color painted on a wall surface.

Limitations for printing colors

It is not possible to print fluorescent or metallic colors. It is also not possible to print white. White colors are based on the white fabric but can be tinted in darker shades by adding hue.

Adding digital textures to a print

When adding a texture to a specific color note that it will tone the color darker. To compensate for this we tone the underlying color in a more light nuance and make variations to preview.

Frame color sample

You can also order a frame color sample. We use powder coating gloss 30. Only paint colors from the Ral color chart are available for frame color samples.

Delivery Information

Make sure to provide the following info to avoid delaying the delivery process: Contact person, delivery address, phone number, invoice address.

File Transfer

Request a sample and specify details:
